Solution Architecture

Date	29 September 2026
Team ID	6ab2a8af5ccf576cf95a906b
Project Name	Cricket Player Performance Tracking Application: CRICKSTATS
Maximum Marks	5 Marks

Solution Architecture Diagram:

CRICKSTATS is built entirely on the Salesforce Platform. The diagram below maps the Presentation Layer, Access Layer, Application Services and Data Layer of the solution.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	User interface through which coaches, managers, analysts and admins register players, enter match performance, and view reports and dashboards. Provides tabs, page layouts and a single Lightning App for all tracking features.	Salesforce Lightning Experience, Lightning App (CRICKSTATS), Custom Tabs, Page Layouts, Salesforce Mobile App
API Gateway	Entry point that receives every user request over secure HTTPS, routes it to the correct platform service and enforces session and access checks before data is touched.	Salesforce Lightning Platform, REST / SOAP APIs, TLS encryption
Auth & Security Service	Controls who can log in and what they can see or edit (coaches view, managers edit, analysts report, only admins change settings).	Profiles, Permission Sets, Roles, Salesforce Authentication / MFA
Microservices (Core Logic)	Applies business logic: validates inputs (e.g. no negative runs), calculates Strike Rate and Economy Rate, rolls up career totals and automatically updates player statistics when match data is saved.	Salesforce Flows (Record-Triggered), Validation Rules, Formula Fields, Roll-Up Summary Fields
Analytics & Reporting	Turns stored match data into real-time insights such as top run-scorers, top wicket-takers and player comparisons for team selection decisions.	Salesforce Reports, Dashboards
Database	Stores all player and match records with data integrity through a master-detail relationship (one Player has many Match Performances). Cloud-hosted with backup and recovery.	Salesforce Custom Objects (Player, Match Performance), Salesforce Cloud Database
