Code-Layout, Readability and Reusability

Date	29 September 2026
Team ID	6ab2a8af5ccf576cf95a906b
Project Name	Cricket Player Performance Tracking Application: CRICKSTATS
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	The AVG Score formula is written in a multi-line, indented IF() format, so it is easy to read.
2	Proper File Structure	Files and folders are logically organized	Yes	Metadata is organized into Player and Match Performance objects, custom tabs, the CRICKSTATS Lightning App, and Player_Flow, built milestone by milestone.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Partial	Field API names like Total_Runs__c and Matches_Played__c are clear. The flow variable "Dynamic" is generic and could be renamed (e.g., selectedTeam).
4	Function / Method Names	Functions are descriptively named	Yes	Names such as Player_Flow, Players screen, Players (Get Records) and Player_info_table describe their purpose.
5	Code Comments	Inline and block comments explain logic	Partial	No descriptions were added to fields, the formula, or flow elements. Adding descriptions is recommended.
6	Modular Design	Code is split into reusable functions/modules	Yes	Separate objects, roll-up fields, a formula field, and a screen flow that can be reused on any page.
7	No Redundant Code	Duplicate or unused code is removed	Partial	A lookup from Player to Match Performance exists even though Match Performance is already the detail of a master-detail relationship. It can be removed.
8	Error Handling	Exceptions and errors are handled gracefully	Partial	The formula avoids divide-by-zero with IF(Matches_Played__c > 0, ...). The flow has no fault path or "no players found" message yet.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	Player & Match Performance objects (master-detail)	Salesforce Custom Objects	Reports, dashboards, flows, Lightning App	High
2	Roll-up summary fields (Total Runs, Matches Played, 50's, 100's, etc.)	Salesforce Roll-up Summary	AVG Score formula, flow data table, reports	High
3	AVG Score formula field	Salesforce Formula	Flow data table, reports, dashboards	Medium
4	Team picklist choice set	Salesforce Flow Resource	Any other flow that needs a team selection	Medium
5	Player_Flow (Screen Flow)	Salesforce Flow	Lightning Home Page; can be added to other pages or the utility bar	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	Objects, tabs, app, and flow are organized logically and built in clear milestones.
Readability	4	Field and flow names are meaningful and the formula is neatly formatted. The generic "Dynamic" variable needs a better name.
Reusability	4	Roll-ups, formula, and flow can be reused across reports, dashboards, and pages.
Documentation / Comments	3	Field, formula, and flow descriptions are missing and should be added.
Overall Score	**3.75 / 5**	A well-structured declarative build. It would improve with descriptions, removing the redundant lookup, and adding flow error handling.
