Project Name	Cricket Player Performance Tracking Application: CRICKSTATS
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Programming Language(s)	Salesforce declarative (low-code): Formula and Flow. No Apex code used.
Framework(s) Used	Salesforce Lightning Platform (Lightning App, Lightning App Builder, Screen Flow, Reports & Dashboards)
Key Features Implemented	• Custom objects: **Player** and **Match Performance** linked by a master-detail relationship • Player fields: Player Name, Player Number, Profile Picture, Date of Birth, Role, Batting Style, Bowling Style, Nationality, Team • Match Performance fields: Match Result, Player of the Match, Runs Scored, Balls Faced, Fours, Sixes, Overs Bowled, Wickets Taken, Runs Conceded, Maiden Overs, Stumpings, Catches • Roll-up summary fields on Player: Matches Played, Number of 50's, Number of 100's, Total 4's, Total 6's, Total Runs, Total Overs, Total Wickets, Total Stumpings, Total Catches • Formula field **AVG Score** = Total Runs / Matches Played (safe against divide-by-zero) • Custom tabs for Players and Match Performances • **CRICKSTATS** Lightning App (Players, Match Performances, Reports, Dashboards) • **Player_Flow** screen flow: choose a team and view its players in a data table (runs, average, styles, 50's, 100's); placed on the app Home Page
Pending / Incomplete Features	• Validation rules for mandatory fields, score limits and input constraints • Record types for Domestic and International matches • Record-triggered flow to automatically update player statistics • Reports and interactive dashboards • Fault path and "no players found" message in Player_Flow • Remove redundant lookup (Player to Match Performance) and add field/flow descriptions • Adding permission sets for Coach, Manager and Analyst roles

Field	Details
Setup / Run Instructions	1. Sign up for a free Salesforce Developer Edition org at developer.salesforce.com/signup and verify the account by email. 2. Setup > Object Manager > Create > Custom Object: create **Player** and **Match Performance** (Allow Reports, Activities, Track Field History, Allow Search). 3. Create the custom fields on both objects, then the Match Performance master-detail field to Player. 4. On Player, create the roll-up summary fields and the AVG Score formula field. 5. Setup > Tabs: create custom tabs for Players and Match Performances. 6. Setup > App Manager > New Lightning App: create **CRICKSTATS**, add the navigation items and assign the System Administrator profile. 7. Setup > Flows: build and save **Player_Flow** (screen flow) and activate it. 8. In the app, open Lightning App Builder for the Home Page, add the Flow component (Player Flow), then Save, Activate and Assign to the CRICKSTATS app. 9. Enter sample Player and Match Performance records, open the app Home Page and select a team to test.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	No
4	Error handling is implemented for critical operations	No
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	No

Additional Notes / Comments:

This is a declarative Salesforce build, so the "code" consists of objects, fields, a formula, roll-up summaries and a screen flow. Objects, roll-ups and the flow are modular and reusable, and names such as Total_Runs__c, Matches_Played__c and Player_Flow are meaningful. Items 3, 4 and 6 are marked No because field/formula/flow descriptions are not yet added, the flow has no fault path (only the AVG Score formula guards against divide-by-zero), and the org metadata has not been committed to a repository yet. These can be changed to Yes once the descriptions are added, the fault path is built, and the metadata is pushed to GitHub.
