Project Executable Files

Date	29 September 2026
Team ID	6ab2a8af5ccf576cf95a906b
Project Name	Cricket Player Performance Tracking Application: CRICKSTATS
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes (Salesforce metadata: objects, fields, flow, Lightning App)
2	README / Setup Guide (instructions to run the project)	Yes (Project Documentation and Step 4 below)
3	requirements.txt / package.json / dependency file	NA (declarative Salesforce build, no external dependencies)
4	Database schema / seed files (if applicable)	Yes (data model and ER diagram in the documentation; sample records are entered in the Player and Match Performance objects)
5	Environment configuration file (.env.example or similar)	NA (no API keys or environment variables used)
6	Deployed application URL (if hosted)	Yes (Salesforce Developer org URL)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes (test screenshots in Milestone 8 of the documentation)
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
/CRICKSTATS
/docs                    - Project documentation and demo planning documents
/screenshots             - Setup, flow and testing screenshots
/force-app/main/default  - Salesforce metadata (retrieved from the org)
    /objects
        /Player__c               - Player object with fields and roll-up summaries
        /Match_Performance__c    - Match Performance object with fields
                                   (master-detail to Player)
    /tabs                        - Player and Match Performance tabs
    /applications                - CRICKSTATS Lightning App
    /flows                       - Player_Flow (Screen Flow)
    /flexipages                  - Home page with the Player Flow component
README.md                - Setup and run instructions
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	[Add your Salesforce Developer org login URL]
Login Credentials (Demo)	[Add demo username and password for evaluator access]
Platform / Hosting Provider	Salesforce Cloud (Developer Edition org, Lightning Experience)
Repository Link	[Add your GitHub / Drive repository link]
Demo Video Link	[Add your demo video link, if recorded]

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

```
Pre-requisites:
- Salesforce Developer Edition org (free) or access to the provided org
- Web browser (Chrome / Edge) and internet connection
- (Optional) Salesforce CLI, only if deploying the metadata to a new org

Step 1: Open the deployed org URL and log in with the demo username and password.
Step 2: Click the App Launcher (9 dots) and open the CRICKSTATS app.
Step 3: Open the Players tab and create player records (name, number, role,
        batting style, bowling style, nationality and team).
Step 4: Open the Match Performances tab and create records linked to each
        player (runs, balls, fours, sixes, overs, wickets, catches, stumpings).
Step 5: Open a Player record and check the roll-up fields (Matches Played,
        Total Runs, 50's, 100's, Total 4's / 6's) and the AVG Score.
Step 6: Go to the Home page, select a team in the Player Flow and click Next
        to view the team-wise player statistics.
Step 7: Open the Reports and Dashboards tabs to view analytics.

Optional (deploy to your own org):
  sf org login web
  sf project deploy start --source-dir force-app
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Requires a Salesforce org and an internet connection; offline access is limited	Use a free Developer Edition org; offline support planned for the mobile app phase
2	AVG Score is runs per match (not dismissals-based), and strike rate, bowling average and economy rate are not calculated yet	Planned in Phase 2 of the roadmap
3	The app is assigned only to the System Administrator profile and reports and dashboards are basic	Separate profiles / permission sets and more charts planned in Phase 2
